

Full stack web development using python

Assignment-6

Saurabh Shukla (MySirG)

Q.1

```
x = 25  
str(number)
```

```
str(x) → '25'
```

Q.2

```
print(ord('m'))
```

Q.3

```
x = 100
```

```
y = chr(x)
```

```
print(y)
```

Q.4

$x = '256'$ ← purely integer in the string

$y = \text{int}(x) \rightarrow 256$

$x = '25.6'$

$y = \text{int}(x) \rightarrow \text{error}$

$x = 'a25'$

$y = \text{int}(x) \rightarrow \text{error}$

Q.5

Every non zero number \rightarrow True
Zero \rightarrow False

```
x = 21  
y = bool(x)  
print(y)
```

True
